

CHRIS Release 16.5 – August 15, 2008

The following are the CHRIS enhancements:

- ❖ **Resolve ChildCare error for CHRIS Users using Vista** computers – to remove the application error when clicking on the Find Provider button in the ChildCare Screen
- ❖ **Revision of AFCARS Disability Characteristics** – to correct two characteristics as a Disability, when selected on the child's Characteristics screen – Facial Abnormality and Cleft Palate/Lip
- ❖ **Providers With No SSN/TIN's** (Taxpayers Identification Number) **CHRIS Report** – a new report in CHRIS Reports (in CHRIS under the Reports button), under State Management Category, Financial Reporting Type, and Unpaid Vouchers Statistical Reports. This report is necessary to capture all new Providers who are expecting a board payment/adoption subsidy, but there was no Federal Employee ID or SSN entered in the Provider's General Information Tab. A Provider must have these two fields completed, in order for them to receive the payment.
- ❖ **CHRIS will be Vista Compatible** – for those of you who receive new computers with Vista installed, CHRIS will work just fine for you
- ❖ **Prevent auto installation when in Test, Development or Training CHRIS** – this is mainly for our CHRIS Testers and Trainers
- ❖ **Change WISE installation for desktop shortcuts and add Crystal Reports Viewer** – this is 'behind-the-scenes' stuff, but benefits all CHRIS Users
