

ARHOME CY 2022 Performance Target Setting

DRAFT - DO NOT DISTRIBUTE

This draft is a working document. All information contained herein is subject to change and may differ substantially from the final document. The information contained in this document should not be considered the position or views of the agency or the Governor.

December 13, 2021

CY 2022 Target Setting

- At the August 2021 meeting, the Department of Human Services (DHS) presented Calendar Year (CY) 2019 ARHOME baseline performance on 21 claims-based measures based on:
 - Overall Arkansas Works population, and
 - By Qualified Health Plan,
 - By Rural/Urban,
 - And by Race/Ethnicity.
- DHS now has same performance data for CY 2020 for comparison as well as CY 2019 Medicaid birth outcomes
- Covid-19 decreased overall healthcare use in 2020
 - As utilization returns to pre-Covid levels, do not want to over-attribute improvement to QHPs
 - For lower-is-better measures, 2019 performance may not be achievable absent the pandemic

Approach to Target Setting

- Targets for all Qualified Health Plans for Calendar Year 2022:
 - Higher-is-better measures = Best (highest) of 2019 or 2020 achieved by any QHP
 - Lower-is-better measures = Best (lowest) of 2019 achieved by any QHP
 - Aim to raise all QHPs to the level of the best performer, proven achievability
 - Acknowledge impact of COVID-19 on utilization
- In the following tables, the best measure is identified by a green box. Each green box therefore is the target for each of the QHPs to achieve in 2022.
- As a follow-up to the previous presentations by the QHPs on their strategic plans, the QHPs have established incentives to be offered as rewards to individuals for participating in health improvement initiatives. Rewards range from \$10 to \$200 on a wide variety of activities.

COVID-19 Effects in 2020: Decreased Healthcare Use in AR Medicaid Patient-Centered Medical Home Program

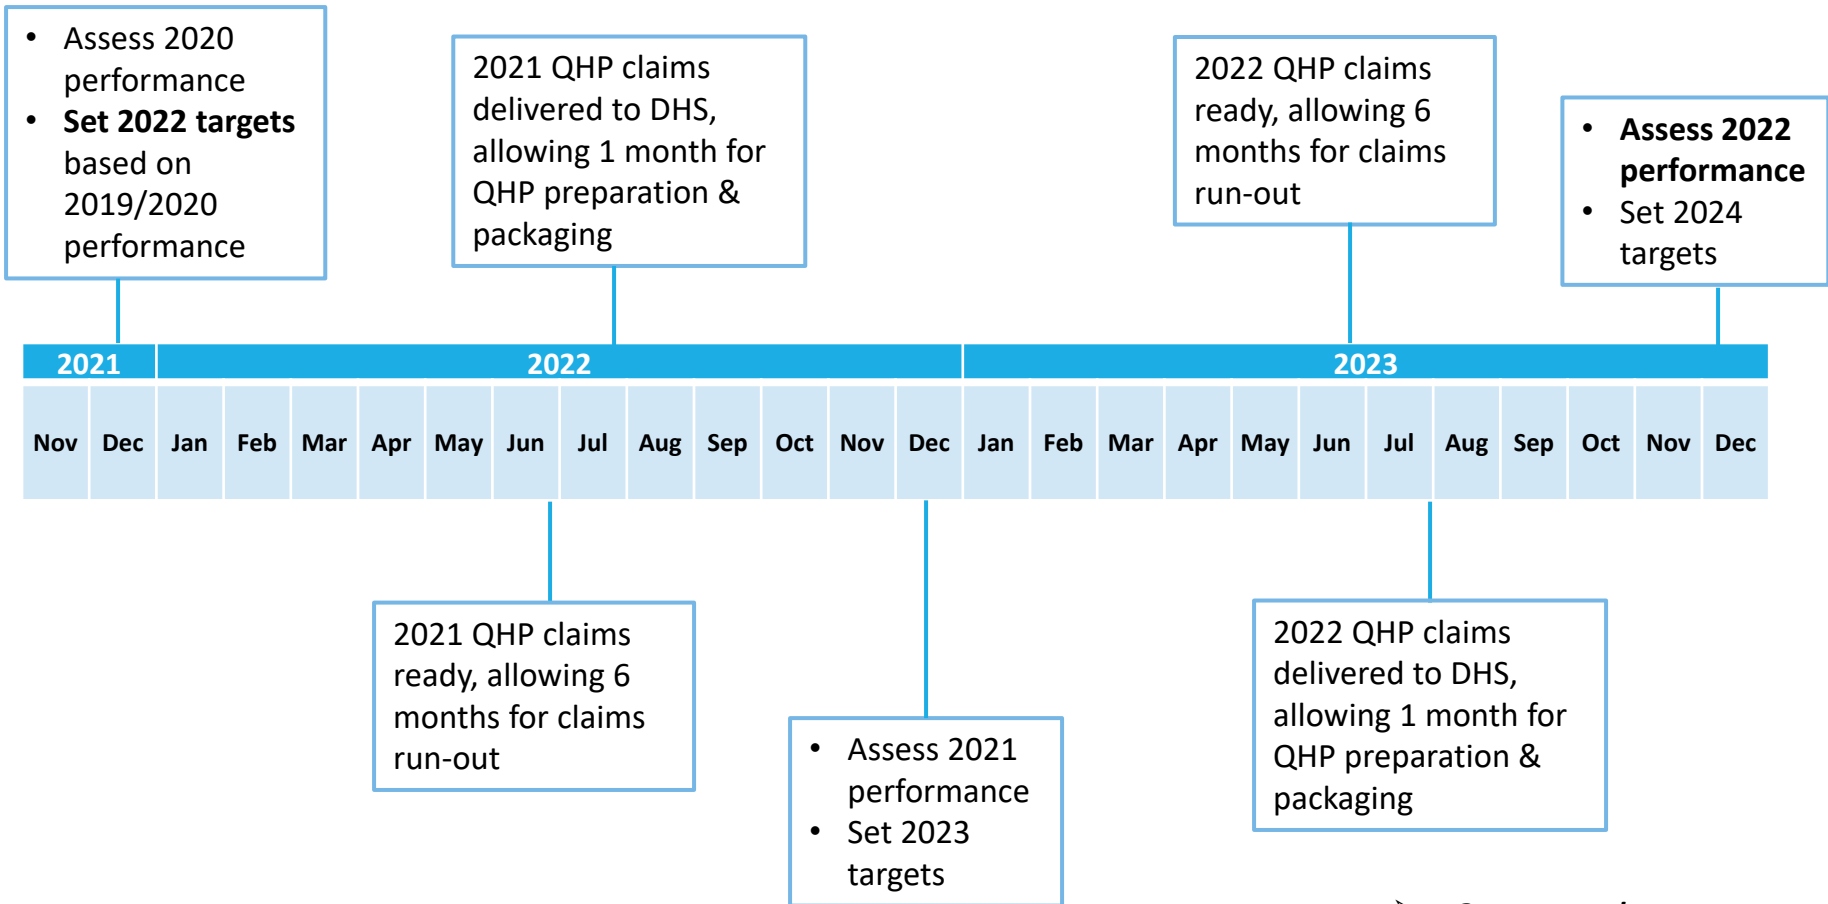

*Detailed metric descriptions appear in the appendix. The PASSE beneficiaries have been removed from Acute Hospital Utilization and Emergency Department Utilization metrics. Source: CY2019 performance period results were from a special run using Q1'21 implementation data and CY2020 performance period results were pulled from Q3'21 implementation production run. Refer to 2020 PCMH addendum manual, <https://humanservices.arkansas.gov/divisions-shared-services/medical-services/helpful-information-for-providers/patient-centered-medical-home/>.

Potential Future Use of Performance Measures

- Publishing on DHS website allows individuals to compare plans
- Allows plans to use “best of” into their selection materials
- Differential auto-assignment for individuals who do not select a QHP
- Corrective action plan for persistent poor performance
- Financial penalties for non-achievement beginning in 2023

Timeline for Data

➤ 24 months to see if targets are met

Data Footnotes

- ¥ Color coding indicates whether the AR Works performance overall is **better (green)** or **worse (red)** than the Medicaid Core Set Mean of Reporting States (see footnote *). AR Works Overall includes beneficiaries w/ aid category 06 and maps to the following benefit plans: HCIP (Health Care Independence Program), ABP (Alternative Benefit Plan), and FRAIL (Full Medicaid for Medically Frail).
- ¥¥ QHP plan level reporting reflects only the beneficiaries known to that QHP plan. QHP Claims from QHP plan were used for reporting. If a beneficiary was enrolled under a Medically Frail (FFS) plan or Alternate Benefit Plan (FFS) during a look-back period, then the claim was not included for QHP plan level reporting. A beneficiary can move from one plan to another plan during the performance period. Thus, the performance of the QHP Benefit Plan overall is not the sum or average of each QHP's performance.
- * CMS published "Quality of Care for Adults in Medicaid: Findings from the 2020 Adult Core Set" Chart Pack (www.medicaid.gov/medicaid/quality-of-care/downloads/performance-measurement/2020-adult-chart-pack.pdf), and "Quality of Care for Adults in Medicaid: Findings from the 2021 Adult Core Set" Chart Pack (www.medicaid.gov/medicaid/quality-of-care/downloads/performance-measurement/2021-adult-chart-pack.pdf).
- ** NCQA's State of Health Care Quality Report. NCQA produces the State of Health Care Quality Report which summarizes performance from the previous calendar year for key HEDIS and CAHPS measures. (<https://www.ncqa.org/hedis/measures/>).
- *** Medicaid overall values include all Medicaid and CHIP beneficiaries except Medicare/Medicaid dual eligible, meaning the population includes individuals in FFS, PCCM, PASSE, PACE, Independent Choices, and AR Works.

TOTAL ENROLLEES for AR Works Overall, AR Works by urban/rural (i.e., MMIS demographic) and AR Works by race/ethnicity (i.e., MMIS demographic) uses point in time beneficiary count as of December 31, 2020 and includes where beneficiary has at least one eligibility segment out of "ABP/Frail/HCIP" eligibility segments, beneficiary was enrolled in at least one of those three ("ABP/Frail/HCIP") benefit plans. AR Works Overall includes out of state beneficiaries.

TOTAL ENROLLEES for AR Works by QHP uses point in time beneficiary count as of December 31, 2020 and includes at least one eligibility segment out of carrier eligibility segments, beneficiary was enrolled in the carrier designated benefit plan.

TOTAL ENROLLEES for AR Medicaid Overall uses point in time beneficiary count as per CMS Core Set guideline as of September 30, 2020, ages 21-64.
- † Homegrown measures guided by the 2020 CMS Core Set technical specifications of "Live Births Weighing Less than 2,500 Grams (LBW-CH)" and using two data sources: (1) birth certificates and (2) MMIS demographic data. Excludes birth certificates where infant living status not equal to yes, where birthweight and gestational week values are unknown or missing, where gestational week values are less than 17 weeks gestation or greater than 47 weeks gestation, and where birthweight values are less than 227g or greater than 8,165g.
- †† CMS used two data sources for reporting this measure for the 2020 CMS Child Core Set: (1) Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and (2) the Centers for Disease Control and Prevention Wide-ranging Online Data for Epidemiologic Research (CDC WONDER) data as of November 24, 2020. (www.medicaid.gov/medicaid/quality-of-care/downloads/performance-on-the-child-core-set-measures-ffy-2020.zip for LBW-CH).

Thank You
